17:18:48.611 -> .....#...#.....  
17:18:48.611 -> .....#...##.....  
17:18:48.611 -> .....#####.....  
17:18:48.611 -> .....#.....  
17:18:48.611 -> .....#.....  
17:18:48.611 -> .....#.#.....  
17:18:48.611 -> .....####.....  
17:18:48.611 -> .....  
17:18:48.611 -> .....  
17:18:48.611 -> .....  
17:18:48.611 -> .....  
17:18:48.611 -> .....  
17:18:48.611 -> .....  
17:18:48.611 -> .....  
17:18:48.611 -> .....  
17:18:48.611 -> .....  
17:18:48.643 -> Found 9 (100)
```

Task 4: Compare Results

The fine-tuned model performs much better than the baseline model. The baseline model fails to recognize 0, 5, 8, 9 and even outputs high confidence scores for those digits; while the fine-tuned model only fails to recognize 5 and 8, but the model outputs lower confident scores for those digits, meaning it's not confident with the result. The fine-tuning also helps with the gesture style, because it is more similar to my collected data.
